

**herbal Shampoo** *plant based, organic*

**Our shampoo is free of petrochemicals, synthetics, alcohols - simply free of toxic ingredients.**

**When you use our shampoo for the first time, you will possibly go through a transition!**

**Let me explain:**

Most shampoos, even the ones that say all natural, organic, etc. contain a toxic, petroleum based foaming agent, *Sodium Laureth Sulfate*.

*Sodium Laureth Sulfate* strips your hair from its natural oils. If you have never used shampoo that is free of it, you will need some adjusting time.

What you might experience is a heavy feeling, which simply means that your natural oils are not getting stripped anymore and your hair gets "confused".

We recommend mixing 1 Tbsp of organic apple cider vinegar to 1 cup of water and rinsing your hair after shampooing to help cut that heavy feeling and soften your hair.

By avoiding petrochemicals you will no longer need conditioner. Your hair will naturally condition itself since your oils are not being stripped.

It is important, that you stick with our shampoo until your hair adjusts. It might take a couple of weeks to fully transition.

Thank you for avoiding those petrochemicals, they are so harsh on us and our environment!

Feel free to contact us with any further questions.
